   - **Deleting a meal:** `delete`
   - **Exiting the program:** `exit`
   - **User profile** ***(coming in v2.0)***
   - **Editing a meal** ***(coming in v2.0)***
   - **Finding a meal by name** ***(coming in v2.0)***
   - **Saving data** ***(coming in v2.0)***
3. **Command Summary**

Quick Start

1. Ensure that **Java 17 or above** is installed on your computer.
2. Download the latest `.jar` file from the project release page.
3. Launch the application and type commands into the command box.

   Press **Enter** to execute the command.

   For example, typing `help` and pressing Enter will display the help window.

Example commands you can try:

- `add`
- `list`
- `delete`
- `help`
- `exit`

Refer to the **Features** section below for detailed explanations of each command.

Features

Viewing help: `help`

Displays a help message containing the usage instructions for all available commands.

Format:

`help`

Adding a food item: `add`

Adds a food item to the list with its calorie and protein information.

Format:

`add n/NAME c/CALORIES_IN_KCAL p/PROTEIN_IN_G d/DATE`

Examples:

- `add n/Chicken Rice c/600 p/25 d/13-02-2026`
- `add n/Cheeseburger c/500 p/27 d/14-02-2026`

Listing all food items: `list`

Displays all food items currently stored in the list.

Format:

`list`

Listing food items for a specific date: `list d/DATE`

Displays all food items logged on the specified date.

Format:

`list d/DATE`

Example:

- `list d/13-02-2026`

Deleting a food item: `delete`

Deletes a food item from the list using its index number.

Format:

`delete INDEX`

Notes:

- The index refers to the number shown in the displayed food list.
- The index must be a positive integer (e.g. `1`, `2`, `3`, ...).

Example:

- Running `delete 2` removes the second food item in the list.

Exiting the program: `exit`

Exits the application.

Format:

`exit`

Setting up user profile *(coming in v2.0)*

Allows users to create and manage a personal profile for customised tracking.

Details coming soon.

Editing a food item *(coming in v2.0)*

Allows users to modify existing food entries.

Details coming soon.

Finding a food item *(coming in v2.0)*

Allows users to find existing food entries.

Details coming soon.

Saving data *(coming in v2.0)*

Enables persistent storage of food data across sessions.

Details coming soon.

Command Summary

Action	Command Format
Add entry	`add n/NAME c/CALORIES_IN_KCAL p/PROTEIN_IN_G d/DATE`
List entries	`listlist d/DATE`
Delete entry	`delete INDEX`
Help	`help`
Exit	`exit`
